The Linux Foundation

[Bookmark this page](#)

The Linux Foundation partners with the world's leading developers and companies to solve the hardest technology problems and accelerate open technology development and commercial adoption. The Linux Foundation makes it its mission to provide experience and expertise to any initiative working to solve complex problems through open source collaboration, providing the tools to scale open source projects: security best practices, governance, operations and ecosystem development, training and certification, licensing, and promotion.

Linux is the world's largest and most pervasive open source software project in history. The Linux Foundation is home to Linux creator Linus Torvalds and lead maintainer Greg Kroah-Hartman, and provides a neutral home where Linux kernel development can be protected and accelerated for years to come. The success of Linux has catalyzed growth in the open source community, demonstrating the commercial efficacy of open source and inspiring countless new projects across all industries and levels of the technology stack.

The Linux Foundation's work today extends far beyond Linux, fostering innovation at every layer of the software stack. The Linux Foundation is the umbrella organization for many critical open source projects that power corporations today, spanning all industry sectors:

- Big data and analytics: [ODPi](#), [R Consortium](#)
- Networking: [OpenDaylight](#), [OPNFV](#)
- Embedded: [Dronecode](#), [Zephyr](#)
- Web tools: [JS Foundation](#), [Node.js](#)
- Cloud computing: [Cloud Foundry](#), [Cloud Native Computing Foundation](#), [Open Container Initiative](#)
- Automotive: [Automotive Grade Linux](#)
- Security: [The Core Infrastructure Initiative](#)
- Blockchain: [Hyperledger](#)
- And many more.
