# ODPi

ODPi is a nonprofit organization committed to simplification and standardization of the Big Data ecosystem with
common reference specifications and test suites.

The ODPi:

- Reinforces the role of the Apache Software Foundation (ASF) in the development and governance of upstream projects

- Accelerates the delivery of Big Data solutions by providing a well-defined core platform to target

- Defines, integrates, tests, and certifies a standard "ODPi Core" of compatible versions of select Big Data open source projects

- Provides a stable base against which Big Data solution providers can qualify solutions

- Produces a set of tools and methods that enable members to create and test differentiated offerings based on the ODPi Core

- Contributes to ASF projects in accordance with ASF processes and Intellectual Property guidelines

- Supports community development and outreach activities that accelerate the rollout of modern data architectures that leverage Apache Hadoop

- Will help minimize the fragmentation and duplication of effort within the industry.
